DETAILED ACTION

1. Claims 1-2, have been examined and are pending.

Priority

Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. KR/10-2004-000298, filed on 15/01/2004.

Information Disclosure Statement

2. An initialed and dated copy of applicant's IDS form 1449 submitted 07/11/2006, is attached to the instant office action.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Addington et al. to **(US6405239)**, hereinafter referred as Addington.

Regarding claim 1, Addington teaches a switch router for transmitting IP packet data, comprising: a Switch Link board Assembly (SLA) for switching an ATM packet data inputted from a higher block to an IP Forwarding Control Assembly (IFCA), the SLA further being operative to switch the ATM packet data inputted from the IFCA to the higher block (**col.12 lines 63- 67 and fig.9 disclose Forerunner ATM Switch 908, components such as the SLA and IFCA would be inherent to the elements disclosed by Addington**)

an IFCA for routing the ATM packet data inputted from the SLA to an EtherNet Link board Assembly (ENLA), the IFCA further being operative to route the ATM packet data inputted from the ENLA to the SLA (**col.12 lines 63- 67 and fig.9 disclose a Cisco Router 910, components such as the SLA and IFCA would be inherent to the elements disclosed by Addington**);

an ENLA for converting the ATM packet data routed from the IFCA to an Ethernet data and transmitting the Ethernet data to the higher block, the ENLA further being operative to convert the Ethernet data inputted from the higher block to a local ATM packet data and outputting the local ATM packet data to the IFCA (**col.12 lines 63- 67, and fig.9 disclose Cisco Router 910 converts the ATM encapsulated IP traffic to Ethernet encapsulated traffic, components such as the SLA and IFCA would be inherent to the elements disclosed by Addington**).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

5. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Addington, in view of Blanc et al. to **(US6125114)**.

Regarding claim 2, Addington does not teach the SLA, the IFCA and the ENLA are connected by fiber optic cable for use in ATM communication.

However, Blanc teaches using fiber optic cable as a connector in ATM communication **(col.18 lines 42-47, and fig.8 disclose switch that uses an optical fiber as a connector)**

Therefore it would have been obvious to one ordinary skill in the art at the time the invention was made to use optical fiber to connect the components of an ATM switch, as suggested by Blanc. This modification would benefit the device of Addington to route and accommodate different formats of data at highest rate.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. (See PTO-892).
